

# DINOTRUX

# PUMPKIN CARVING

## TEMPLATES

### YOU WILL NEED:

Carving tool    Large metal spoon or fleshing tool    Masking tape    Needle tool    Battery-operated LED

1

Cut a hole in the bottom of your pumpkin. Scoop out the flesh and seeds with a spoon or fleshing tool.

2

Securely tape your design to the pumpkin and trace it by poking holes along the dotted lines with a needle tool.

3

Remove the template and use your carving tool to cut along the pattern you created with the needle tool. Note: You will be cutting out and removing only the gray areas of the template.

4

Place a battery operated LED underneath your pumpkin for a Halloween that **ROARS!**

### TIP

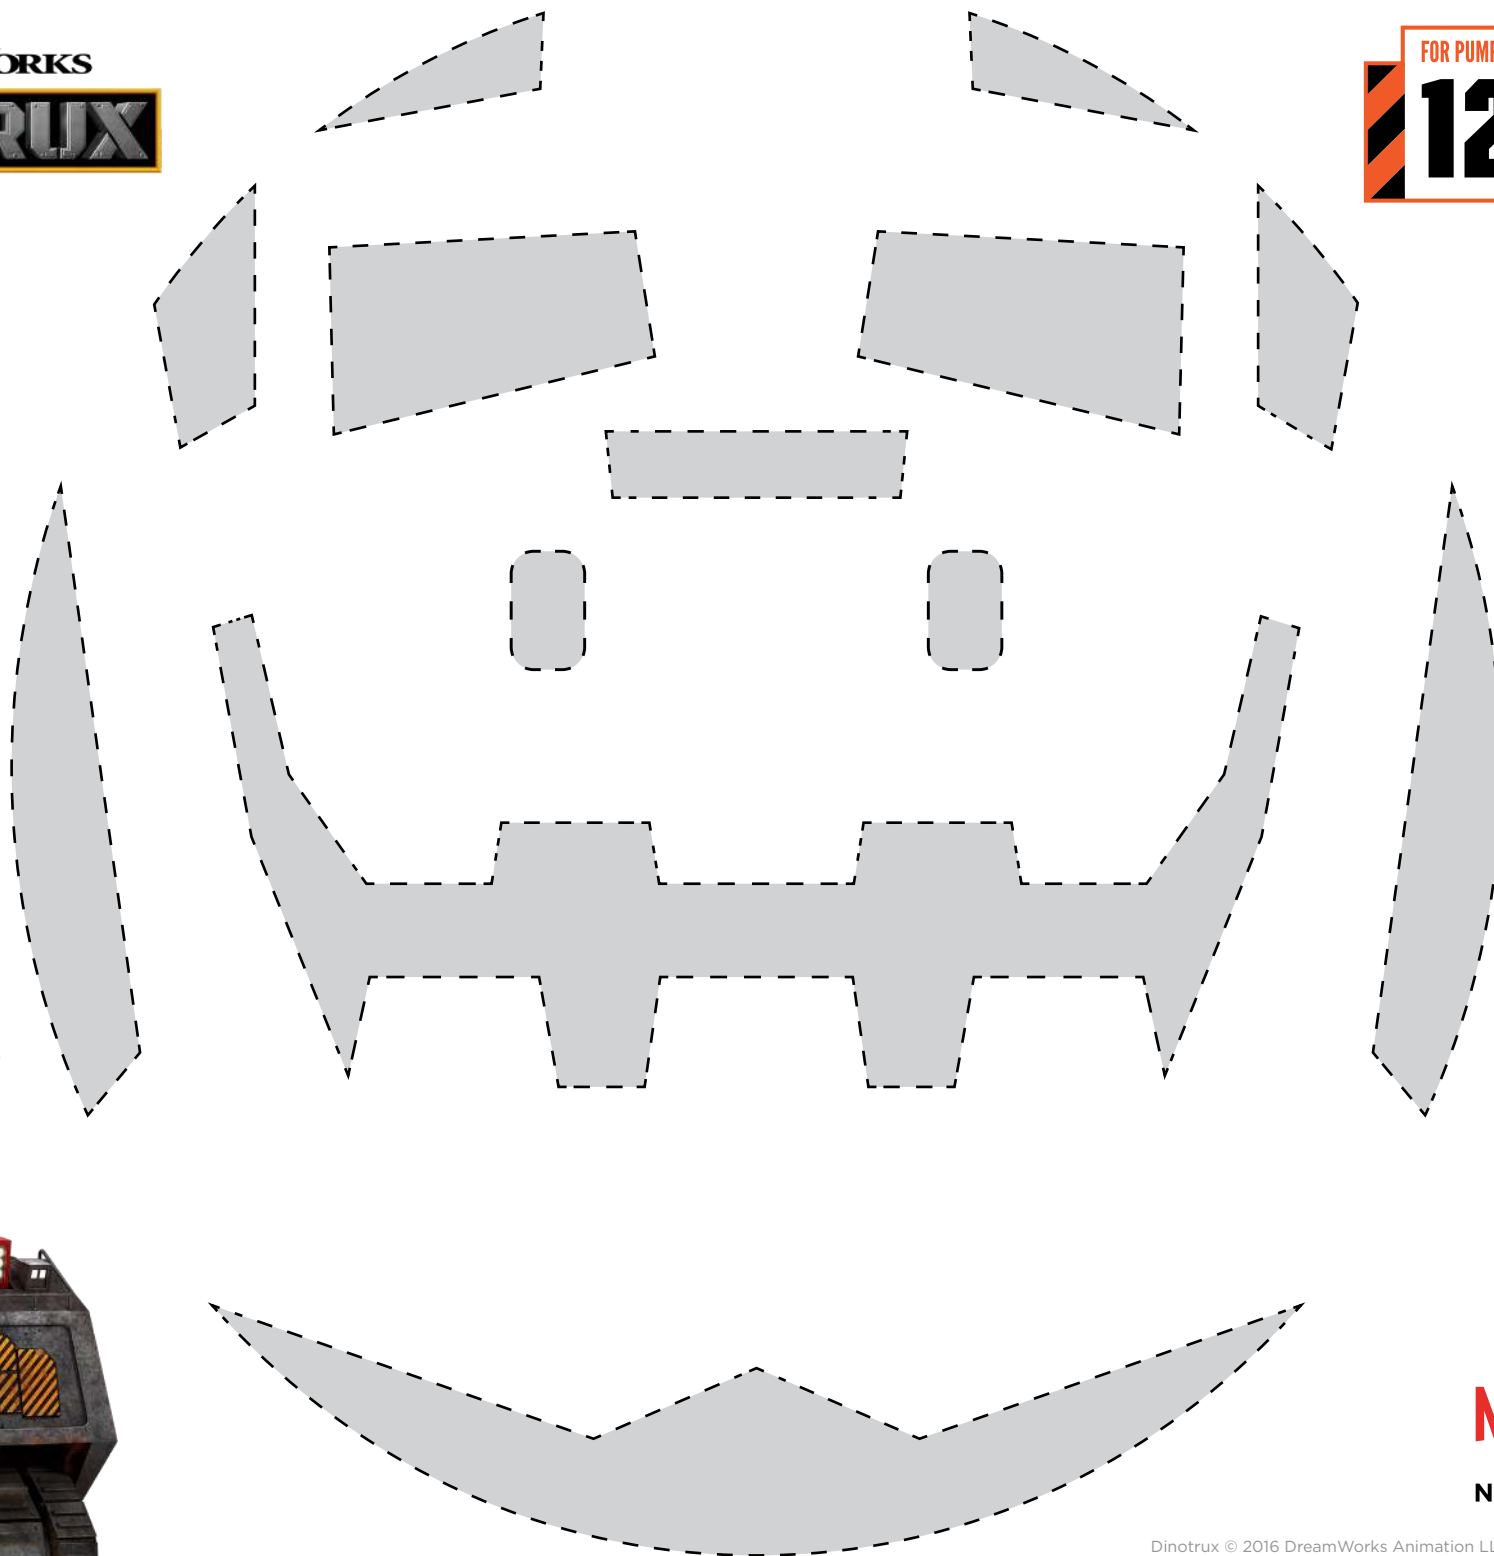

Apply a layer of petroleum jelly to the exposed areas of your pumpkins to keep them from turning brown!
